

IN THE SPECIFICATION

Please replace the previously amended paragraph starting on page 5 lines 1-7 with the following paragraph:

A baffle 68 is mounted at condenser second end 18 to prevent longitudinal air flow parallel to wires 14 that decreases heat transfer efficiency. Fan blade 62 is mounted at condenser first end 16 external of opening 44 and draws air through condenser 40 substantially perpendicular to condenser outer surface 24 and longitudinally after condenser 40 and toward compressor 64 to cool compressor 64 as well. In alternative embodiments, other closure members besides baffle 68 are used to close condenser second end.
